

Raising \$100K

Make the economically invisible visible.

Software-first economic impact infrastructure for governments, tribal nations, enterprises, and mission-driven organizations.

PROBLEM

Economic Impact Analysis is Stuck in the 90s.

Months-Long Projects

Every study takes a quarter to a year. Time is the binding cost, not modeling capacity.

Five-Figure Per Study

Practical cost runs \$25,000 to \$100,000 once software, consulting, and staff time are added together.

Black-Box Assumptions

Reports cite multipliers without surfacing the choices behind them. Defending the number is the analyst's burden.

Stagnant Incumbents

IMPLAN and REMI predate the cloud. The category waits for one of them to modernize or for a new entrant to do it.

IMAGE · PLACEHOLDER

LEGACY WORKFLOW

Suggested: photo of paperwork / spreadsheets / consultant

Source Intake. Harmonize. Defend. Deliver.

IMAGE · PLACEHOLDER

CEDAR UPLOAD

01

Source Intake

PDFs, CSVs, XLSX files dropped into Cedar.
Every field extracted and typed.

IMAGE · PLACEHOLDER

CEDAR HARMONIZE

02

Harmonize

Inputs structured against public datasets.
Geographies, sectors, and time windows
resolved automatically.

IMAGE · PLACEHOLDER

ASSUMPTION LEDGER

03

Assumption Ledger

Every modeling choice surfaces for analyst
sign-off. Override, annotate, or approve in
place.

IMAGE · PLACEHOLDER

BRANDED EXPORT

04

Branded Deliverable

Report, deck, and executive summary export
with the customer's visual identity and the
assumption record attached.

Three Platforms. One Engine. One Ladder.

01 Local

Cities, counties, and state agencies. Tier ladder ships 2026.

02 Tribal

Tribal governments, enterprises, and Native organizations. Same engine, sovereign-aware geographies.

03 Cedar

AI workflow inside Sapling and Tree tiers. Source intake, harmonization, assumption tracking.

04 Cedar Grove

Organizational intelligence layer (2027). Harmonized customer memory across every study.

05 Global

Cross-border and supply-chain analysis (2028). Same backbone, international geographies.

06 RIMS II / IMPLAN-Class Engine

Underneath the AI layer: a credible regional input-output engine re-parameterized for complex jurisdictions.

Built for the Hardest Geography First.

Tribal economies force the hardest version of every modeling problem.
The infrastructure that solves them deploys directly into the rest of the market.

- ✓ Sovereign-Aware Geographies
Reservations, trust lands, ANC regions, and Native Hawaiian Home Lands as first-class objects.
- ✓ Defensible Assumptions
Every multiplier and every modeling choice surfaced for analyst sign-off before export.
- ✓ Recurring Refresh
One subscription, unlimited studies, quarterly refresh without reopening a contract.

The Underserved Edge of a Proven Category.

TAM

1.9M+ U.S. employer firms

Plus 90,837 local governments, 575 tribes, 4,150 colleges, and the global subnational layer (140+ countries).

SAM

\$1B+ recurring

Tens of thousands of larger public charities, public-sector agencies, and tribal organizations carry recurring impact-study budgets today.

SOM

\$25-100M near-term

575 federally recognized tribes + a focused set of cities, counties, and federal-program offices reachable in the first 24 months.

Existing Demand

IMPLAN serves 900+ clients; Charlesbank acquired a controlling stake in 2024 for \$100M+ at 35% YoY growth (WSJ).

Underserved Customers

Most organizations in the addressable set have never run an EIA because the cost floor is \$25K-\$100K per study.

Global Tailwind

Subnational governments manage 40% of public expenditure and 58% of public investment in OECD countries.

COMPETITION

Built for Modern Workflows, Not Legacy Software.

	MODERN STACK	TRIBAL-AWARE	RECURRING	AI-ASSISTED	DEFENSIBLE

AI-only tools					

KEY ADVANTAGES

- Tribal & Native-Economy Expertise
Federal Reserve CICD, NCAI, Native Entity Enterprise dataset.
- Complex-Geography Engine
Sovereign geographies as first-class, not approximations.
- Cedar Grove Memory
Switching cost compounds as studies accumulate.
- AI + Defensible
Cedar surfaces every assumption for human sign-off before export.

Recurring Subscriptions, Unlimited Studies.

IMAGE · PLACEHOLDER

PRICING TIERS

Tiered Subscriptions

Sprout / Sapling / Tree. \$7,500 to \$25,000 annual per platform. Cedar AI included in Sapling and above.

IMAGE · PLACEHOLDER

CUSTOMER ECONOMICS

Per-Customer Economics

One subscription, unlimited studies, every geography included. Quarterly refresh without reopening a contract.

IMAGE · PLACEHOLDER

CONSULTANT TIER

Consulting Layer

Arborist (consultant plan, \$15K) and Toolbox (publication-ready deliverables, +\$15K) for firms running studies on outside clients.

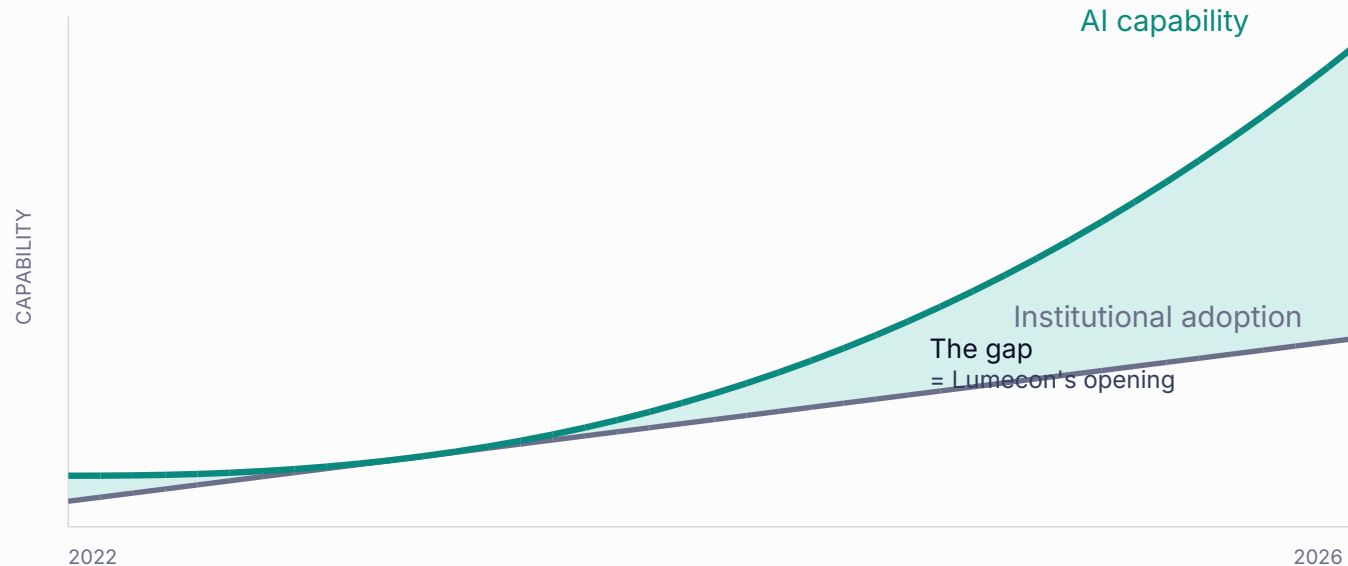

IMAGE · PLACEHOLDER

MARGIN CURVE

Margin Trajectory

Software-led; data and modeling infrastructure are sunk costs. Cedar Grove deepens switching cost and renewal rate over time.

AI Capability Outpaces Institutional Adoption.

Modeling Capacity

Engine speed and multiplier libraries have been adequate for decades. Capacity has never been the bottleneck.

Document Throughput

Reading PDFs, cleaning spreadsheets, naming assumptions, and drafting narratives is the actual binding constraint.

Reviewable AI

Customers will adopt AI when every step is reviewable. Cedar's assumption ledger is built for that constraint.

Tribes First. Cities Follow. Global Next.

Founder-Led Wedge

First Tribal and Local pilots acquired via direct outreach to tribal governments, NCAI relationships, and state EDOs.

Partnership Layer

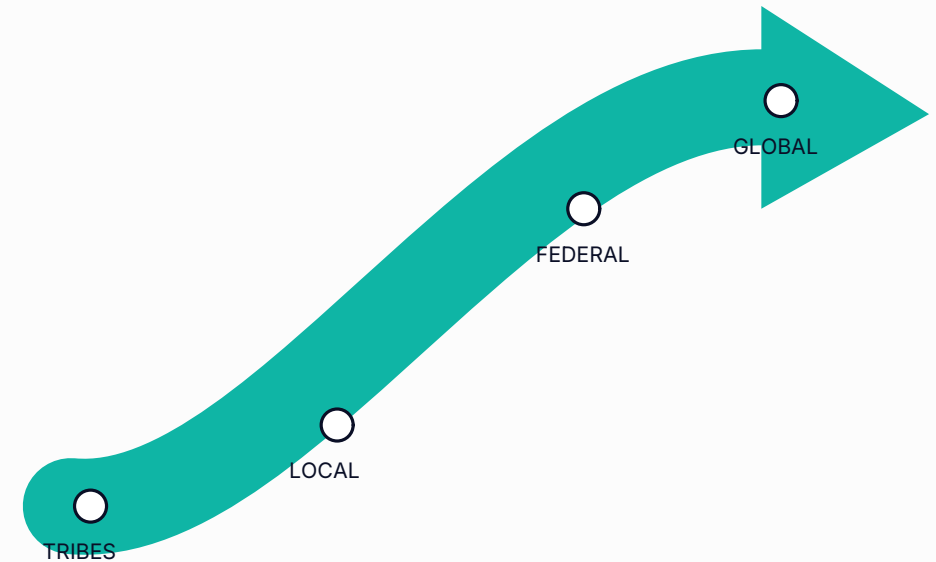

NACA, tribal enterprise networks, Native CDFI Coalition, and Cornell CICD pipeline drive the next cohort of pilots.

State + Federal Programs

Federal-program impact reporting (HUD, USDA, EDA, BIA) becomes a recurring use case that pulls the customer base broader.

Global Expansion

Subnational governments worldwide carry the same measurement problem; UCLG and OECD networks open the international leg.

MVP. Pilots. Platform.

Researchers Who Built the Data.

IMAGE · PLACEHOLDER

ELIJAH MORENO

Founder + CEO

Tribal Economy Expertise

Federal Reserve CICD, NCAI Mankiller Fellow, Native Entity Enterprise dataset.

Economic Modeling

Duke PhD, Oxford MSc, Federal Reserve Board and CICD economists, Native CDFI lending research.

Cedar / AI

Illinois Urbana-Champaign. AI assistant for source intake and assumption tracking.

Platform Engineering

Cornell CS+Business. Customer-facing platform end to end. Modsy and Chime architecture advisory.

ADVISORS

VV

Vod Vilfort
MIT econometrics. AER: Insights, 2025.

BK

Brian Kim
Dartmouth. Modsy + Chime engineering.

HH

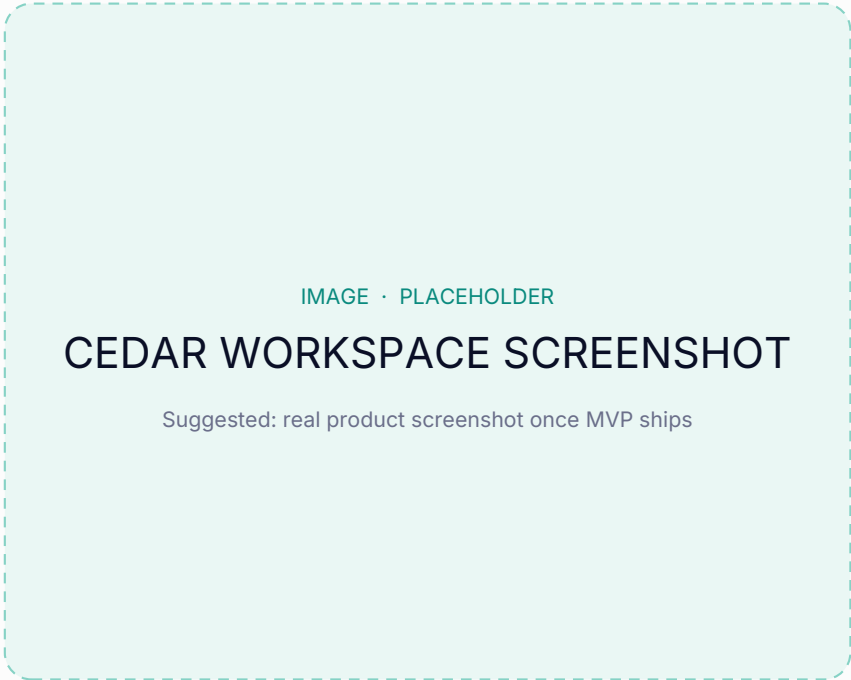

Havala Hanson, PhD
Alaska Fairbanks. Data governance.

LW

Laurel Wheeler, PhD
Duke Econ. Federal Reserve CICD.

Capital Deployed. Counsel Engaged. MVP Underway.

Founder Capital	\$50K committed, \$25K already deployed across contractor work, infrastructure, and incorporation.
Fellowship Support	\$6K awarded (fellowship name TBD pending founder confirmation).
Legal Engagement	Cornell Law Entrepreneurship Clinic actively engaged on corporate, IP, and customer-contracting workstreams.
MVP Delivery	Local and Tribal Economic Impact pilot tier ladder targeting end of June 2026; full launch end of 2026.
Strategic Outreach	Early conversations underway with NACA and tribal enterprise networks as priority pilot relationships.
Commercial Surface	lumecon.ai live with public product positioning, pricing, and inbound capture.

\$100K to MVP and First Paid Pilots.

16 months of focused build, contractor capacity, and pilot acquisition.

\$50K 50%

Contractors

Economist, two data scientists, and software engineer at 8 to 12 hours per week for six months.

\$10K 10%

Infrastructure

Cloud computing, storage, monitoring, and security stack.

\$30K 30%

Legal · Compliance · IP

Corporate governance, customer contracting, financing documentation, patents, trademarks, copyrights.

\$10K 10%

Marketing · Pilots

Pilot implementation, customer onboarding, sales motions, early customer-acquisition spend.
